CAREER OBJECTIVE

A motivated and detail-oriented Computer Science student seeking an industrial attachment opportunity to apply academic knowledge and practical technical skills in a professional ICT environment. Passionate about software development, web technologies, and database systems, with a strong desire to learn and contribute to innovative technology solutions.

EDUCATION

Bachelor of Science in Computer Science

Karatina University

Relevant Coursework:

- Software Engineering
 - Database Systems
 - Probability & Statistics
 - Web Development
 - Artificial Intelligence Fundamentals
-

PROFESSIONAL TRAINING

Software Engineering Program

ALX

- Gained hands-on experience in full-stack development and collaborative coding.
- Built real-world applications using JavaScript, Node.js, and MySQL.

- Developed strong problem-solving and debugging skills.

Full Stack Web Development Training eMobilis Training Institute

- Trained in HTML, CSS, python, and modern web development practices.
 - Built responsive and interactive web applications.
 - Learned UI/UX design principles and client-side scripting.
-

TECHNICAL SKILLS

Programming Languages: JavaScript, Python, SQL

Web Technologies: HTML5, CSS3, Node.js, Express.js

Database: MySQL

Tools & Platforms: Git, GitHub, Heroku

APIs & Integration: REST APIs, Africa's Talking SMS API

Other Skills: Authentication Systems, Responsive Design, Debugging, Version Control

PROJECTS

WiFi Network Intrusion Detection with SMS Notification

- Developed a system to detect new devices connecting to a WiFi network. □
Implemented SMS alerts using Africa's Talking API.
- Designed database schema for device logging and whitelist management.

Corruption Reporting Hub

- Built a web-based platform for reporting and tracking corruption cases.
- Implemented user authentication, admin dashboard, and status tracking.
- Technologies used: Node.js, Express, MySQL, HTML/CSS/JS.

Blog Platform

- Developed a full-stack blogging system with user registration and comments.
- Implemented search functionality and responsive design.
- Focused on clean UI and efficient data management.
- Backend: Node.js & Express | Database: MySQL.

Ant death automation

Develop to help drivers avoid accidents

WORK EXPERIENCE

Freelance Web Developer / Personal Projects

- Designed and developed responsive websites and dashboards.
 - Integrated backend APIs and databases for dynamic applications. □
Improved system performance through testing and debugging.
-

LEADERSHIP & ACTIVITIES

- Leader, Innovation Club – Organized tech innovation activities and collaborative software projects.
 - Active participant in academic and security-related development projects.
-

PERSONAL ATTRIBUTES

- Strong analytical and problem-solving skills
 - Quick learner and adaptable to new technologies
 - Team player with good communication skills
 - Self-motivated and highly disciplined
-

LANGUAGES

- English – Fluent
 - Swahili – Conversational
-

INTERESTS

- Full Stack Web Development
- Cybersecurity & Network Monitoring
- Artificial Intelligence Applications
- Building scalable business technology solutions
